CEE 538 Computer-Aided Project Management

Which Project Management Systems are used in CEE538?

Students in CEE538 will use the following project management systems:

- Microsoft Project Pro (MSP) and
- Primavera P6 Pro (P6).

How do Students run these Project Management Systems?

Students can run MSP and P6 in one of two ways:

- Through CAEN and CAEN's Windows Remote Desktop Service (see links below).
- By installing and running MSP and P6 on their own Windows PC.
  Instructions on how to download and install MSP and P6 on personal computers are available in separate documents.

What is CAEN's Windows Remote Desktop Service?

CAEN's Windows Remote Desktop Service allows students to access CAEN Windows computers over the network, either from inside U-M, or through the Internet from home.

Once students access these CAEN Windows computers over the network, they can run any program (such as MSP and P6) that is part of the CAEN Lab Software Environment (CLSE).

For more information, follow the links below:

- Description of CAEN's Windows Remote Desktop Service.
- Instructions on how to connect to CAEN's Windows Remote Desktop Service using VMware Horizon View.
  - Connecting to CAEN's Windows Remote Desktop Service requires the use of Duo Two-Factor Authentication (2FA) to log in. All that is needed is to enroll a device. Once that is complete, there are two options for connecting:
    - Use a browser and Connect Over the Web: to https://caen.midesktop.it.umich.edu/
    - Connect Using the VMware Horizon View Client. (This is the better choice; you should install the VMware Horizon View Client on your own computer.)
      Connection Server: caen.midesktop.it.umich.edu

How do I launch an application such as MSP or P6 on the CLSE for Windows?

The programs in the CAEN Lab Software Environment (CLSE) that are used often (such as Word, Excel, and Project) are always available through the Windows "Start menu".

Other programs that are not used that often, such as P6 and Bluebeam Revu, are not installed locally on CAEN computers and do not (initially) appear in the Windows "Start menu".

Instead, each time you log into a CAEN Windows computer (either locally in a CAEN lab, or remotely through the network using the VMware Horizon View Client), you will be presented with the *AppsAnywhere* "web store" that lists the available software titles. You will select a program to run (such as P6 or Bluebeam Revu) and this program will then be added dynamically to the Windows "Start menu" and be available to run from there.

Click for instructions on how to launch a software application on the CLSE for Windows.
