CEE538 Computer-Aided Project Management

How do I Organize the CEE538 Folders and Files on my Windows Personal Computer?

- Create the folder "CEE538" that will store all the files (your own work) for CEE538, inside the standard Windows folder "Documents" for your account (e.g., "YourName"):
    - C:\Users\YourName\Documents\CEE538
- Inside the folder "CEE538" create the following subfolder where you will store the templates for Microsoft Project (you will tell Microsoft Project the path for this folder later):
    - C:\Users\YourName\Documents\CEE538\ProjectPro_Templates
        - The steps for downloading and installing the example MS Project template for CEE538 are described in the document:
            - "Example MS Project Template.pdf"
- Inside the folder "CEE538" create the following subfolder where you will store your Primavera P6 Pro SQLite databases (you will tell P6 about the path to this folder later):
    - C:\Users\YourName\Documents\CEE538\P6_Databases
        - The steps for creating P6 SQLite databases are described in the documents:
            - "How to Download and Install Primavera P6 Pro.pdf"
            - "P6 SQLite Databases.pdf"
- Inside the folder "CEE538" create the following subfolder where you will store your work for the various CEE538 Lab assignments:
    - C:\Users\YourName\Documents\CEE538\Labs
- Inside the above folder "Labs" create several subfolders for the various CEE538 Lab assignments, such as:
    - C:\Users\YourName\Documents\CEE538\Labs\Lab1
    - C:\Users\YourName\Documents\CEE538\Labs\Lab2
    - Etc.
        - Inside each of these subfolders you will store the files for the corresponding Lab Assignment, such as the Microsoft Project files, the Word files, the PDF files, the zip files, etc. (except for the P6 database, see above):
