CEE538 Computer-Aided Project Management

How do I download the example Visualizer Layout?

Visualizer is a separate program that comes with Primavera P6 Pro that can be used to create time-scaled graphical reports that can be quite detailed and impressive.

The example "layout" file for Visualizer is available on the course website on Canvas. Its name is:

2025-Lab1-ChemLabTarget_TSLD.vlf

The filename extension “vlf” stands for Visualizer Layout File.

This Visualizer layout file provides most of the required formatting for Lab1.

How do I Import the example Visualizer Layout file into Visualizer?

Run P6 and open the project that you wish to use with Visualizer, so you can see its activities in the “Activities tab”. Use the P6 menus to start the Visualizer program (with the current project as input to Visualizer) as follows:

- Tools > Visualizer

Visualizer will then start.

In Visualizer click on "More" (at the top center of the screen) and select "Manage"

Click on "Import" and follow the prompts to import the example Visualizer layout file.

How do I apply the example Visualizer Layout?

To use the example layout imported into Visualizer with Lab 1, click on "+" (at the top center of the screen) to create a new TSLD (Time-Scaled Logic Diagram) for the project that you have created in P6 for "Lab1 - Chemical Lab Remodeling Project". Format the TSLD diagram with the "User" layout that you have imported.
