CEE538 Computer-Aided Project Management

From where do I Download Primavera P6 Pro to install on my own Windows PC?

Students in CEE538 and CEE536 should download **Primavera P6 Pro R24.12.7** from the link below. This is the **latest** version of P6 and is the **same** version as that installed on CAEN:

Video Tutorial: How to Download and Install Primavera P6 Pro

The YouTube video in the link below describes how to download Primavera P6 Pro R24.12.0 from https://edelivery.oracle.com (notice that this is a slightly older version—the last digit is 0 and not 7) and then describes how to install P6 on your own Windows computer.

https://www.youtube.com/watch?v=tDfxwKNWjKc

Even though this video shows how to download Primavera P6 Pro R24.12.0 (which is an older version), it is still useful because it shows the steps for installing P6 on your own Windows PC.

Students should download Primavera P6 Pro R24.12.7 from the Google Drive link above and then follow the instructions in the video to install P6.

NOTE: Before installing P6, see the file "How to Organize your Folders and Files" (available on Canvas) for instructions about **where to store the P6 database files on your PC**.

As part of the installation of P6 you will create two P6 SQLite databases on your Windows computer (similar to the two P6 databases available to each student on CAEN). You should name each database file and its "Connection" (which is also called an "alias" or "shortcut") as follows:

Connection (alias, shortcut)	Database file
"Personal"	" Primavera2412DB_YourName_Personal.db "
"Sample"	" Primavera2412DB_YourName_Sample.db "

To create the two P6 databases, the instructions in the video need to be modified as follows:

- "Personal" (empty) database: At 8min:00sec into the video, remove the checkmark in the checkbox "*Load Sample Data*" at the lower left of the dialog box.
  This will allow you to create an empty SQLite database to which you should give the "Connection" name "Personal" and in which you will save your own work for CEE538. Name the Connection and the database file as shown in the table above.

- "Sample" database: Repeat the same steps to create a second SQLite database. This time follow the instructions in the video and do not clear the checkbox "*Load Sample Data*". This will create a second database that contains the sample projects provided with P6. Name the Connection and the database file as shown in the table above.

IMPORTANT: See the document about "P6 SQLite Databases" on Canvas for more details.
