The Advanced Education Program in General Practice *Residency*

Gaining confidence in providing general dental care in an operating room is one objective of the General Practice Residency (GPR) program. Dr. Samuel Zwetchkenbaum (right), GPR program director, and resident Dr. Will Chow (second from left) treat a developmentally disabled patient under general anesthesia at the U-M Medical Center. Observing the procedure as part of their one-week rotation are third-year dental students Sara Johnson (left) and Margaret Gingrich (second from right).

Commendations

"The program is commended for the depth of resident instruction and experience in removable prosthodontics and dental implant restoration."

"The program is commended for the outstanding training and experience in oral and maxillofacial surgery and dental call/dental trauma."

"The program is commended for providing excellent clinical experiences and didactic training in treating developmentally disabled and medically compromised patients."

Learning to administer intravenous fluids to patients is a skill occasionally needed for routine dental care or emergencies. Dr. Dexter Flemming (standing), assistant GPR director, shows general practice resident Dr. Nicole Saltzman how to start an IV on third-year dental student Ali Aminlari.
