October 1996 Forecast Update
Executive Summary

Spring '96 Growth Spurt

Late September estimates from the Department of Commerce pegged the annualized pace of real GDP expansion at a hefty 4.7 percent in the second quarter of 1996, up from 2 percent in the first quarter and a mere ¼ of one percent in the final quarter of '95. Part of the acceleration reflected a rebound from the federal government shutdowns in the fourth and first quarters, severe weather in January, and the GM strike in March, but strong growth in consumer spending and in residential building also contributed to the vigorous spring quarter expansion.

Evidence of Moderation

The second quarter surge initially rekindled fears of an overheating economy that could fuel a renewal of inflationary pressures, but monthly data accumulating since June suggest that the pace of output expansion has moderated:

- *Payroll employment gains averaged 145 thousand jobs per month in the July-September period, down from 236 thousand additional jobs per month during the first six months of '96.*
- *Third quarter vehicle sales averaged 15 million units at annual rate, slightly below the 15.2 million unit pace set in the first half of the year.*
- *Residential construction spending, in constant dollars, peaked in April, with spending more than 2 percent lower in the July-August period than in the previous three months.*
- *Real consumer spending in July and August increased only moderately from its spring quarter average; and*
- *Manufacturing production, which expanded at an average annual rate of 5.9 percent in the January-June period, decelerated to a 3.3 percent growth pace in the July-August period.*

We estimate that the pace of economic growth dropped to 2.4 percent in the third quarter of '96, reflecting real final sales growth at about a 1½ percent rate combined with some inventory stock-building.

Weaker Growth this Quarter

We are forecasting sluggish growth in real final sales in the final quarter of '96 as well. With inventory building projected to contribute a smaller boost than in '96.3, real GDP growth is forecast to slip to just under 2 percent.

Monetary Policy and Interest Rates

The Federal Reserve opted not to raise short term interest rates following the second quarter output acceleration, citing evidence in August that the economic expansion had moderated in June and July and that inflation remained quiescent. Our estimate for third quarter and our near-term forecast validate the Fed's no-change policy, and indicate no need to raise rates after the election, either.

With output expansion forecast to continue at a slightly below-trend pace over the next two years, we anticipate no additional pressure to change the current stance of monetary policy in the direction of further tightening.

Short term interest rates are forecast to remain near their late September-early October averages. Long term interest rates are forecast to drift down by about 30 basis points, with the 30-year Treasury bond rate settling at about 6½ percent in the second half of 1998.

Sustainable Growth During 1997-98

With only a modest personal tax cut assumed in effect by late '97, consumer spending remains on a moderate growth path. With federal purchases assumed to be on a contractionary path, real GDP is forecast to increase by 2.1 percent during 1997 and by 1.9 percent during '98.

Our analysis indicates that the current trend rate of real GDP growth would be about 2⅛ percent. With output expanding at a pace that is a bit below the trend rate, the unemployment rate drifts up from 5¼ percent in the third quarter of '96 to 5½ percent at the beginning of 1998 and 5.7 percent at the close of that year.

Inflation Contained

During 1993 and '94, when there was considerably more unemployment than now, hourly compensation rates were rising at an exceptionally low 2 percent per year. The recent tightening of labor markets has been accompanied by an increase in the rate of inflation in hourly compensation to 4.2 percent during 1995 and an expected 3.9 percent this year, including the impact of the first installment of the minimum wage increase on the 1st of October.

With output expansion moderating and the unemployment rate forecast to be drifting up, hourly compensation is forecast to increase by 4.1 percent during 1997 and by 3.6 percent during '98.

Core industrial prices, as measured by the nonfarm output deflator, are forecast to increase by 2.1 percent during 1997 and by 2.5 percent during 1998.

Consumer prices, measured by the deflator for personal consumption expenditures, increase in step with core prices, rising by 2 percent during '97 and by 2.6 percent during '98.

The U.S. Economic Outlook for 1996-98
October 1996 Forecast Update

Introduction

By the time the Department of Commerce released its first estimate of economic growth for the second quarter of 1996 in late July, the financial markets were already anticipating a possible hike in short term interest rates by the Federal Reserve. Second quarter growth came in at a strong 4.2 percent. (It has since been revised up to 4.7 percent.) And there was some concern that the economy was starting to overheat. A number of special factors contributed to the strong growth in the second quarter. Severe winter weather early in the year held down economic activity in January, and an auto workers' strike shut down most of General Motors in March. Further, the catch-up from the federal government shutdown temporarily reversed the underlying trend of declining real federal purchases, sending them up at a better than 9 percent annual rate in the second quarter. In addition, both residential building and consumer spending on durables posted strong gains in the second quarter, accelerating from already healthy increases earlier in the year.

In his Humphrey-Hawkins testimony, Fed Chairman Alan Greenspan indicated that the Fed anticipated slower economic growth in the second half of the year, so the watch was on for signs of a weakening economy. The monthly data have been mixed, but a number of indicators point to moderating economic activity in the quarter just ended.

There is some evidence of at least a flattening out if not a slight decline in housing activity. Existing home sales averaged 4.15 million (annual rate) over the June-August period compared to 4.23 million over the previous three months. Housing starts in July and August averaged the same 1.49 million pace as in the second quarter, and constant dollar

spending on residential building has been declining since April.

Monthly data on consumption spending suggest some moderation in the third quarter as well. The July-August average for real consumer purchases is only about one tenth of one percent above the second quarter figure while durable goods purchases are actually down.

Light vehicle sales, which include sales to businesses and government as well as consumers, backed off slightly in the third quarter to a 15 million unit pace compared to a 15.2 million pace in the first half of the year.

While the unemployment rate dropped from 5.4 percent in the second quarter to 5.2 percent in the third, the pace of payroll job growth slowed from an average of 272 thousand per month during the April-June period to 145 thousand per month during July-September.

The Fed held Open Market Committee meetings in August and September and opted both times to hold short term interest rates steady. We believe the estimate of third quarter growth due later this month will validate that decision. We now estimate that real GDP growth slowed to 2½ percent in the third quarter -- a combination of some inventory stock-building and 1½ percent growth in real final sales. The slower growth in final sales derives from a return to a declining path in real federal purchases, a slight decline in residential building following a second-quarter surge, and an increase in consumer spending at a 1½ percent pace compared to the 3.4 percent posted for the previous quarter.

Inputs to the Forecast

With continued slower growth and no evidence of inflationary pressures building, we expect that the Federal Reserve will elect to maintain its current monetary policy stance. In the context of our forecast of moderate expansion during 1997 and '98, we are assuming that the Fed will hold the discount rate at 5 percent and maintain the federal funds rate target at 5¼ percent.

Interest rates increased from early in the year until June or July with short term interest rates rising by 30-40 basis points and long term rates rising by 90-130 basis points as market participants reacted to stronger economic growth and concerns about consequent inflation. As evidence of moderating economic growth mounted, the rise in interest rates halted,

with both short and long term interest rates still near their July levels in September.

Chart 1 shows the implications of our monetary policy assumptions for interest rates. Short term rates are forecast to remain fairly stable through the end of 1998 with the three-month Treasury bill rate hovering around 5 percent. Long term interest rates drift down slowly over the forecast horizon declining by 45-60 basis points from their September '96 averages by the end of 1998.

In order to accommodate election-year campaign schedules, Congress passed the remaining legislation required for the 1997 budget in the closing days of September. Substantial progress in reducing the deficit has been made since 1992 when the budget deficit topped out at $271 billion (on a National Income and Product Account basis), and we are assuming that systematic deficit reduction will remain high on the agenda of the 1997 Congress and the administration.

Our projected budget incorporates spending restrictions implied by the recently enacted welfare reform legislation, and we have assumed restrained spending in other entitlement programs and discretionary areas. We have also assumed that a personal tax cut will be implemented during 1997. We expect that the tax change will be retroactive to the beginning of the year and will generate $20 billion in annual tax savings, as would a $500 per child tax credit. We have incorporated no further tax cuts over the forecast horizon.

Table 1 presents the details of the federal budget which results, in the context of our forecast, from our fiscal policy assumptions. Federal current expenditures are projected to rise by 3.1 percent in fiscal 1997 and 2.6 percent in fiscal '98 following an estimated increase of 3.4 percent for fiscal '96.

After declining in fiscal '96 for the fifth consecutive year, consumption expenditures for defense are projected to remain essentially flat in fiscal '97 and then to decline by 3/10 of one percent in fiscal '98.

We estimate that nondefense consumption expenditures increased by 1.9 percent in fiscal '96, substantially less than the 5.9 percent increase in fiscal '95. With continuing efforts to rein in federal spending even more tightly, nondefense consumption expenditures are projected to hold nearly constant over the next two fiscal years.

Total transfer payments, which rose an estimated 5.7 percent in fiscal '96, are projected to increase by 5.3 percent

1. Data for fiscal 1995 are from the Survey of Current Business, August 1996.
2. RSQE projections and Control Forecast for fiscal years 1996-1998.

in fiscal '97. A somewhat lower increase of 4.8 percent is projected for fiscal '98 when the new welfare reform program is fully implemented.

Grants-in-aid to state and local governments, which increased by an estimated 3.7 percent in fiscal '96, have slowed dramatically compared to the double-digit growth rates which marked the early 1990s. Moderate increases in grants-in-aid of 3-3½ percent are projected for the next two fiscal years.

Federal revenues increased by an estimated 5.7 percent in fiscal '96 and are forecast to rise by 4.7 percent in fiscal '97. The assumed tax cut raises refunds and reduces settlements in 1998, contributing to a lower increment in federal revenues, 2.5 percent, in fiscal '98.

After peaking at $271 billion, or 4.4 percent of GDP, in fiscal 1992, the NIPA basis federal deficit declined steadily to an estimated $142 billion, 1.9 percent of GDP, by fiscal '96. Further progress is forecast, with the deficit improving to $123 billion, 1.6 percent of GDP, in fiscal '97, but the assumed tax cut holds the deficit at $127 billion in fiscal '98. An extrapolation of our forecast through fiscal '99, with federal expenditures assumed to increase by 2.8 percent, suggests that federal revenues would increase by 4.1 percent and that the NIPA deficit would decline to about $110 billion, or 1.3 percent of GDP in fiscal '99.

After robust growth during 1994, the economies of our major trading partners began to slow in early 1995. As measured by a weighted average of the indexes of industrial production for Canada, Japan, the U.K. and Germany, aggregate output abroad fell during the spring and summer quarters, and was essentially flat during the final quarter of the year. Preliminary estimates indicate renewed growth at a 1.6 percent annual rate in these economies during the first half of 1996. We are assuming that the economies of our major trading partners will continue to expand during the second half of 1996, with aggregate production growing at a 2.2 percent annual rate. Aggregate production abroad is projected to accelerate to a 3.2 percent pace by late 1997 and to remain at that pace throughout the forecast horizon.

Foreign short term interest rates (weighted average, G-10 countries) have fallen relative to U.S. rates during the past year as monetary authorities abroad tried to stimulate their own economies and, in addition, help bolster the value of the dollar. As economic growth accelerates abroad, foreign rates are forecast to move up over the next two years. By

late '98 the ratio of U.S. to foreign interest rates is forecast to remain above the levels which prevailed for most of the early 1990s.

In the context of our forecast, the exchange value of the dollar rises by 3.8 percent during 1997 in response to the temporarily high ratio of U.S. to foreign interest rates. Thereafter, the value of the dollar drifts down as foreign short term interest rates rise relative to U.S. rates and the U.S. current account deficit deteriorates from an annual rate of about $145 billion currently and through most of 1997 to about $170 billion by late 1998.

The Forecast for 1996-98

As Chart 2 indicates, we are forecasting that the economy will be expanding at or slightly below the trend growth rate for the next two and a half years. As discussed earlier, we now estimate that real GDP grew at an annual rate of 2½ percent in the third quarter of 1996 following a 4.7 percent increase in 1996.2. We anticipate growth in output will slow further to just under a 2 percent pace in the final quarter of the year as real final demand growth remains near 1½ percent but the contribution from inventory investment is smaller than in the third quarter. Output growth accelerates to average 2.4 percent during the first half of 1997 and then eases back to 1¾ percent during the second half of '97 and just under 2 percent during 1998. Although not part of our forecast, our preliminary analysis indicates continued growth at about a 2¼ percent pace in early 1999.

The implications of our output forecast for unemployment and inflation are shown in Chart 3. We estimate that the current trend rate of real GDP growth would be about 2⅛ percent. With output growing at a 2.4 percent pace during the first half of '97, the unemployment rate is forecast to hover around 5.3 percent. With the economy growing slightly below the trend rate during the latter part of '97 and 1998, the unemployment rate drifts up to 5.4 percent by the end of '97 and 5.7 percent a year later.

Inflation remains well contained over the forecast horizon. Core industrial prices, measured by the private nonfarm output deflator, are forecast to increase by 2.1 percent per year during 1996 and '97 and by 2.5 percent during 1998. Consumer prices, measured by the consumption deflator, are forecast to rise by 2.5 percent during 1996, 2 percent during 1997 when farm prices retreat to more normal levels, and 2.6 percent during 1998.

Chart 2: RSQE Forecast For 1996-98

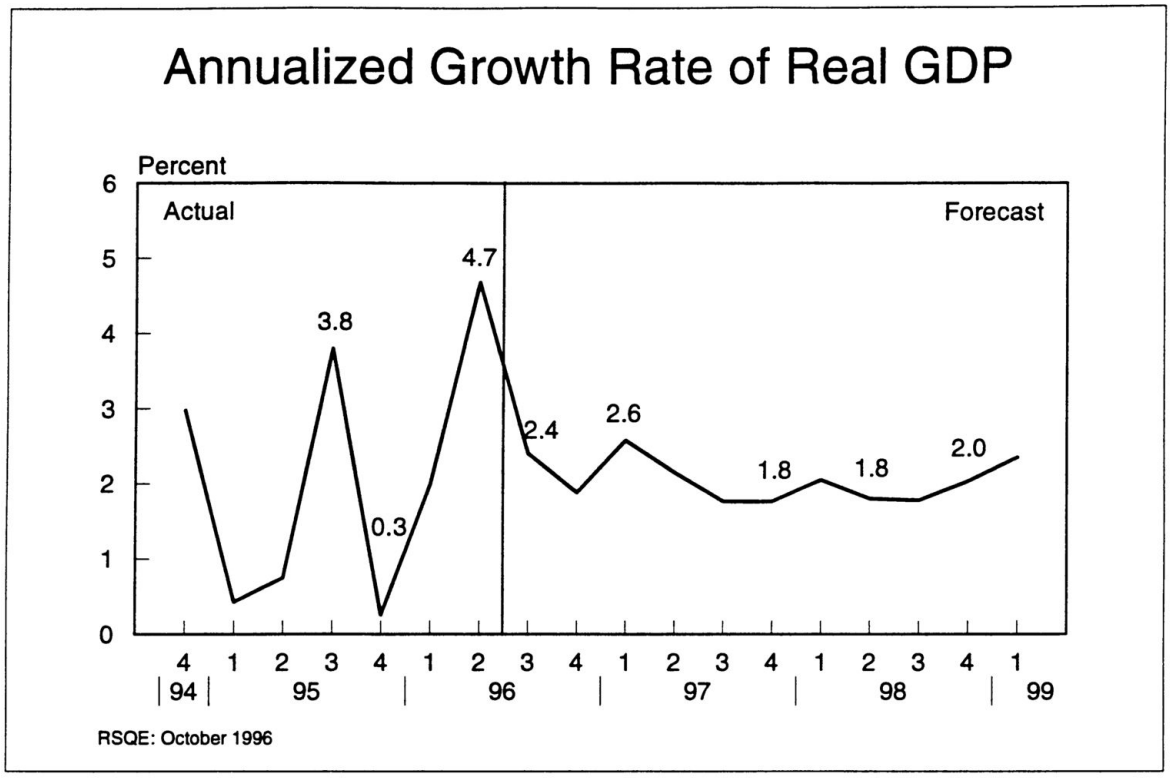

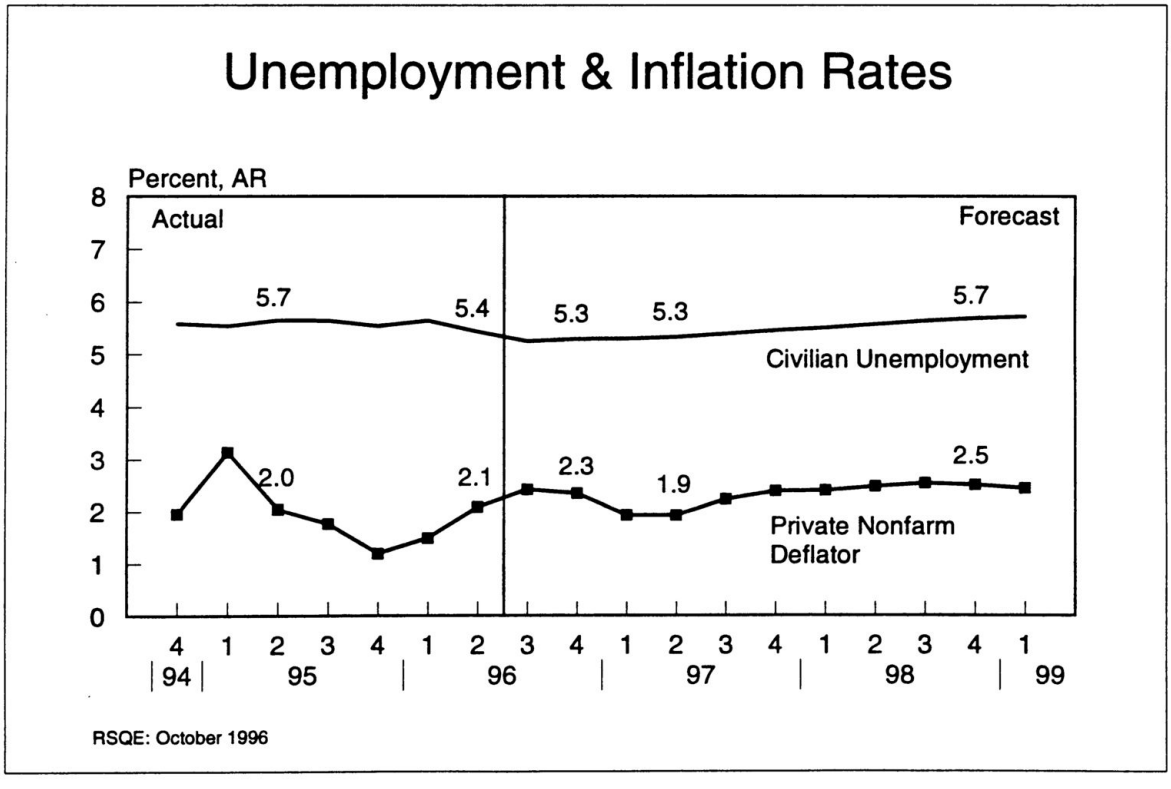

Chart 3: RSQE Forecast For 1996-98

Light vehicle sales which totaled 14.7 million in 1995 have run well ahead of their '95 pace thus far this year. Car and light truck sales averaged a 15.2 million unit pace during the first half of '96 before edging back to a 15 million vehicle pace for the summer quarter. Light vehicle sales are forecast to remain near 15 million throughout the forecast period. On a calendar year basis, car and light truck sales are forecast to total 15.1 million vehicles in both 1996 and '97 before edging down to 15 million for 1998.

Residential building activity is forecast to decline through mid 1997 as housing starts drop to just under a 1.3 million unit pace. With mortgage rates forecast to settle at about 7.8 percent in late '97, housing starts edge up to 1.34 million and remain there through the end of the following year.

Business capital spending for plant and equipment, particularly information processing equipment, has been a substantial contributor to economic growth over the past four and a half years (from the end of 1991 through mid 1996) as real business fixed investment increased at an average annual rate of 7.6 percent. Growth in this sector is forecast to continue at about a 7½ percent pace in the second half of the year and then to moderate over the rest of the forecast horizon. Real business purchases of plant and equipment are forecast to increase by 4.4 percent during 1997 and by just under 4 percent during '98.

Despite the improving economies of our major trading partners, our real net exports are forecast to deteriorate through mid 1998 in response to the increase in the value of the dollar.

Real government purchases act as a drag on the economy over most of the forecast horizon, as restrained growth in spending at the state and local level is insufficient to offset the projected declines in real federal purchases.

The principal economic indicators in our 1996-98 forecast are summarized in the enclosed Executive Summary. Full quarterly detail is contained in the computer output attached to this update.
