Dear Congressman Knollenberg,

I just received your blurb and as a long time advocate of a constitutionally limited republic. I was surprised to read that you are buying into the global warming / climate change farce!

Number one, there is no consensus as to man made crisis, therefore I am reluctant to jump on the band wagon.

Number two, mostly due to a Democratic Senate our ability to use our own oil, not prone to be a polluter, makes us buy from Canada and Mexico, even Venezuela sending our dollars, to those countries

You mentioned ("Biofuels") look at the ethanol boondoggle!

Please look at the energy problem with your mind not your heart and you will find most of our problems begin with poor policies of both political

OVER

parties.

Please challenge the failed liberal thinking in the House

Use your two minute speeches and speech orders to prove the fallacies of the present leadership of Pelosi Frank and the others

We need an energy policy addressing nuclear power, oil exploration getting out of ethanol production and the ridiculous anti-business legislation that is crippling our economy.

Time to stand-up for.

Yours
Arthur J Baldwin
