Re Energy + gasoline price.

Dear Congressman Wade,

Your comments tonight need an insult to the intelligence of our citizens, at least to mine.

1. Aren't you happy gas price is high. → more conservation less driving → less pollution → less global warming
2. You could call on China & India to shut down their economies → less demand.
3. Your policy – no drilling, no nuclear power, no windmills where else but (eg Cape Cod) provide independence on Middle East Oil. If drilling had been encouraged we would be far better off, while developing alternate sources of energy.
4. High gas prices today is the fault of the Dem Party.

Sincerely, Harry Maisel.

P.S. I believe China, Cuba & others will soon be drilling off the Florida Coast. What are your plans for that?

RE: energy and gasoline price

Dear Congressman Hodes *(NH-2)*,

Your comments tonight were an insult to the intelligence of our citizens, at least to mine.

1) Aren't you happy gas price is high → more conservative → less driving → less pollution → less global warming.
2) You would call on China and India to shut down their economies → less demand.
3) Your policy – use drilling, use nuclear energy, use wind power where elite live (e.g. Cape Cod) - provides dependence on Middle East Oil. If drilling had been encouraged we would be far better off, while developing alternate sources of energy
4) High gas prices today is the fault of the Democratic Party

Sincerely Harry Maisel.

P.S. I believe China, Cuba and others will soon be drilling off the Florida Coast. What are your plans for that?

Random note from Jason

Hodes Statement on Energy:

Renewable Energy

New Hampshire is known for its pragmatism, and it is widely recognized that America's dependence on foreign oil is not practical- not for our national security, not for our environment and not for our economy. That's why I am fighting to make New Hampshire a leader in the developing field of alternative energy. I co-sponsored the Energy Alternatives Act (HR 6), which rolled back the billions in subsidies the Bush Administration gave to oil companies. Most importantly, it reinvests that money in a Strategic Renewable Energy Reserve to jumpstart our investment in renewable and alternative energy resources, and to promote conservation and the development of critical new technology.
