For Release: 10/12/2007

The U.S. Economic Outlook for 2007–2009
Executive Summary: October 2007

A Good Macroeconomy

There's a lot of good that can be said about the current U.S. macroeconomy, such as:

- *As of 2007q2, real GDP has expanded for 23 consecutive quarters, registering an annual average growth rate of 2.7 percent,*
- *The unemployment rate is low and, for the year to date through September, the monthly count of payroll jobs has averaged 137.8 million, a gain of 1.9 million jobs over the same period last year,*
- *Core prices have remained under control with the first half of this year registering significantly less core CPI inflation than the first half of 2006, and*
- *Measured by the S&P500, the stock market rose by 5.7 percent over the first 9 months of this year.*

So why all the economic concerns which seem so prevalent?

The Bad with the Good

The table below provides a clue: there's a mixed bag of good news and bad news, with the latter being very tangible, indeed.

Selected Economic Indicators, 2005q4-2007q3

	Units	2005q4	2006q2	2006q4	2007q2	2007q3
Real GDP Growth, Half Year Ended	(%, AR)	2.8	3.6	1.6	2.2	---
Unemployment Rate	(%)	5.0	4.7	4.5	4.5	4.7
Core CPI Inflation, Half Year Ended	(%, AR)	2.1	2.8	2.5	2.1	---
Price of West Texas Oil	($s/barrel)	60.02	70.70	60.21	65.03	75.38
Home Price Inflation,* Year Ended	(%)	13.6	3.5	-2.8	-1.6	-0.5**
30-Yr Mortgage Rate	(%)	6.2	6.6	6.3	6.4	6.6
Housing Starts	(Thous, AR)	2069	1861	1555	1464	1349**
New Homes For Sale	(Thous)	500	565	543	544	533**
Light Vehicle Sales	(Mill, AR)	16.0	16.4	16.3	16.0	15.9

*Based on median price of existing home sales. **Based on July and August data.

Although GDP growth has continued, it has slowed down over the past year. And while unemployment is low, it's no longer declining.

Core inflation is subdued, just 2.1 percent at annual rate over the half-year ended in 2007q2.

Oil prices, on the other hand, despite the high levels reached 2 years ago, have continued to move up and the price of West Texas oil posted an average of $75.38/barrel in 2007q3.

The path of oil prices has been accompanied by hefty increases in energy costs, which have taken a bite out of household purchasing power, as well as pushing gasoline prices to nearly $3/gallon. These developments help to explain the drop in new light vehicle sales to a pace of 16 million units in the 2nd quarter of this year and just 15.9 million units in the 3rd quarter. These are well off the 16.9 and 16.5 million vehicle sales of calendar years 2005 and 2006, respectively.

But the weakness in the vehicle sector is distinctly moderate compared to that in housing!

The Housing Slump

Years of substantial price appreciation have given way to depreciating home prices—a significant blow to the wealth of many households. As the table shows, home prices fell by 2.8 percent during 2006, compared with an increase of 13.6 percent during 2005. And home prices have continued down in 2007.

This turnaround in home prices is just a piece of the general weakness in the homebuilding industry. Recent financial market innovations resulted in a boom in subprime mortgage lending which fed a huge run-up in home sales and construction. That bubble burst just about 2 years ago and produced a seizure in credit markets both here and abroad.

This led to a buildup in the inventory of new homes awaiting sale—a 13 percent increase, from 500 to 565 thousand, during the first half of 2006—and a plunge in housing starts. At a rate of 1349 thousand, housing starts in July-August of this year were down 35 percent from the closing quarter of 2005.

The Fed and other central banks have lowered interest rates and pumped liquidity into the banking system in response to these pressures in the credit markets. This tactic appears to be preventing the development of a system-wide credit crunch.

The 2007-2008 Outlook

The housing slump has a ways to go before sales and construction turn back up. But the evidence clearly suggests that the forces of decline are easing. Home price deflation is moderating, the inventory of new homes for sale is shrinking, and the rate for conventional, as opposed to creative, high-risk mortgages is holding steady under Fed support.

We expect real GDP to post a moderate 2.5 percent growth rate during the 2nd half of this year, little more than the 2.2 percent registered during the 1st half of the year. In the closing quarter of the year we expect light vehicle sales at a rate of 16.1 million units, a small improvement from midyear levels.

The economy then strengthens during 2008, posting a growth rate of 2.9 percent during the 1st half of the year and 3.4 percent during the 2nd half.

The residential sector hits bottom by next spring with the pace of housing starts at a low of about 1264 thousand and ends next year with starts recovering to a rate above 1416 thousand in 2008q4.

The unemployment rate edges up to a peak of about 5 percent in mid 2008 and then slips back to about 4.8 percent by the end of 2008.

The firming of the economy during 2008 leads to payroll job growth improving from a pace of 105 thousand per month in the 1st quarter to 170 thousand per month by the 4th quarter of the year.

Core CPI inflation registers 2.3 percent for calendar 2007 and a similar 2.4 percent for 2008, both down a bit from the 2.5 percent core inflation of 2006.

A Strong Year in 2009

We're forecasting real GDP growth of 3.5 percent for calendar 2009, the strongest since the 3.6 percent growth of calendar 2004.

Strong growth, declining unemployment, and an upward drift in core inflation will move the Fed to a turnaround in monetary policy in 2009. We expect the federal funds rate, currently at 4.75 percent, to be moved up by 125 basis points between the spring of 2009 and yearend, when it reaches 6 percent.

Sales of light vehicles are forecast to total 16.6 million in calendar 2009, while housing starts recover to a total of 1610 thousand for the year.

	Actual	RSQE Forecast

The U.S. Economic Outlook for 2007–2009
Forecast Update: October 2007

Saul H. Hymans, Joan P. Crary, Janet C. Wolfe

Some of the recent concerns about the prospects for the U.S. economy have lessened of late. The Federal Reserve's actions to contain the credit crisis resulting from problems in the subprime mortgage market appear to have been successful. Monthly payroll employment gains, though modest, are much better than early estimates for August suggested. And consumers appear more resilient than many had feared; according to the Reuters/University of Michigan survey, consumer sentiment, after dropping in August, has been largely unchanged through early October.

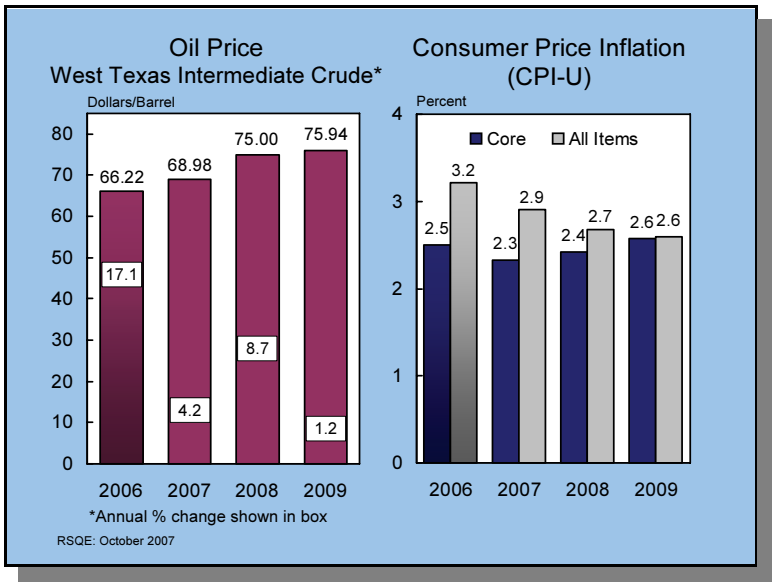

The retrenchment in the housing sector is still unfolding, however, and economic growth will continue to be moderate while the excesses in the housing market dissipate. Output growth finishes the year at a pace slightly below the 2.7 percent average rate for the expansion thus far. The economy starts to improve when the housing market hits bottom next spring and then accelerates into the second half of 2009 as the recovery in homebuilding solidifies and business and consumer spending are invigorated.

The pace of job growth slowed sharply this summer. After averaging nearly 150 thousand job additions per month from December to May, payroll employment grew by only 90 thousand jobs per month from May to September. The latter pace proved too sluggish to maintain the unemployment rate, which inched up from 4.5 percent to 4.7 percent. With job growth weak into the early months of next year, the unemployment rate edges higher to 4.9 percent by next spring, but the strengthening labor market that accompanies the acceleration in output brings the jobless rate back to 4½ percent by late 2009.

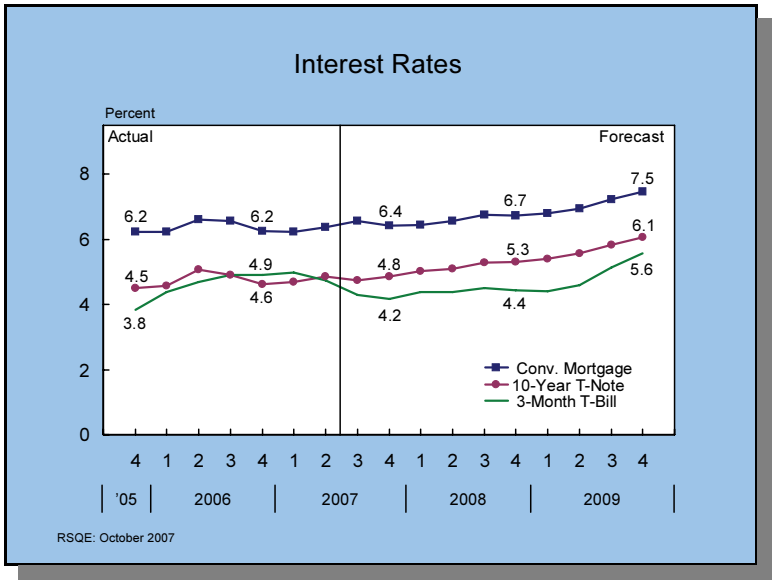

- Real GDP growth, which averaged 2.2 percent during the first half of 2007, holds steady at 2½ percent through the first quarter of 2008.
- Output growth accelerates as the housing sector improves, rising from a 3.2 percent pace in 2008q2 to just under 4 percent in the second half of 2009.
- Average monthly employment gains hover near 100 thousand jobs through the turn of the year and then climb to over 200 thousand jobs by late 2009.
- After rising by 1.1–1.2 percent per year during 2007–08, payroll employment increases by 1.8 percent during 2009, about on par with the gains of 2005–06.

The price of west Texas intermediate crude oil has marched higher this year from an average of $54 per barrel in January to nearly $80 in September. World oil supplies continue to be tight, and the draw on U.S. crude inventories in the third quarter was unusually large. We expect the price of oil to retreat from the $80+ per barrel range but to stay high as strong world demand and low surplus production capacity persist. Core consumer price inflation, which backed off from readings of nearly 3 percent (yr. on yr.) in August–October 2006 to just over 2 percent this August, picks up again but remains moderate.

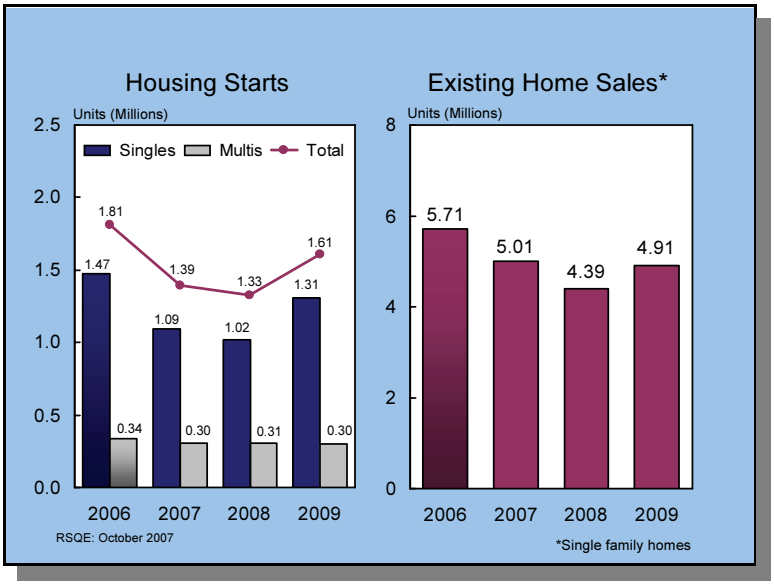

- ❑ The price of west Texas intermediate crude oil averages about $69 per barrel this year.
- ❑ Although the price of oil retreats from current levels, it averages $75–$76 per barrel in 2008–09.
- ❑ Core CPI inflation edges down to 2.3 percent this year but moves back to 2.4 percent in 2008 and 2.6 percent in 2009.
- ❑ All-items CPI inflation runs ahead of core inflation through 2008, but the differential narrows as food and energy price inflation moderates.
- ❑ Headline CPI inflation slows from 3.2 percent in 2006 to 2.6 percent by 2009.

The Federal Reserve and other central banks began pumping liquidity into the banking system in August when spillover from problems in the subprime mortgage market resulted in a global scramble for liquidity. At its mid-September meeting, the FOMC lowered the target federal funds rate to 4.75 percent. These actions appear have averted development of a system-wide credit crunch. We expect the Fed to hold the fed funds rate steady through early 2009, but by spring of that year, strong growth and an upward drift in core inflation will prompt a series of rate increases to 6 percent by yearend.

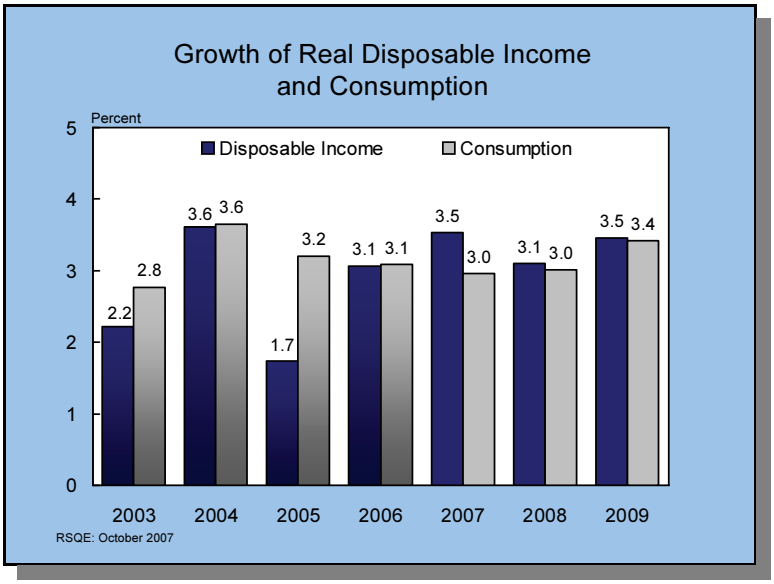

- ❑ The 3-month T-bill rate moves up from its recent lows and then holds steady near 4.4 percent from 2008q1-2009q1.
- ❑ The 3-month T-bill rate rises with the fed funds rate during 2009 and reaches 5.6 percent in 2009q4.
- ❑ The 10-year T-note rate increases to 5.3 percent at the end of 2008 and 6.1 percent a year later, up from a projected average of 4.8 percent in 2007q4.
- ❑ The 30-year conventional mortgage rate rises from 6.4 percent this quarter to 6.7 percent in late 2008 and 7½ percent at the end of 2009.

Homebuilding activity and existing home sales continue to drop through early 2008, but the worst of the housing sector downturn is behind us. Home price deflation is moderating. The inventory of new homes for sale is shrinking. Conforming mortgages remain available to credit-worthy borrowers at favorable rates, and conditions in the jumbo mortgage market are expected to improve over time. By mid 2008, both residential construction and existing home sales begin to turn up. Existing home prices stabilize relative to year-earlier levels in the second half of '08 and then edge above previous highs in mid '09.

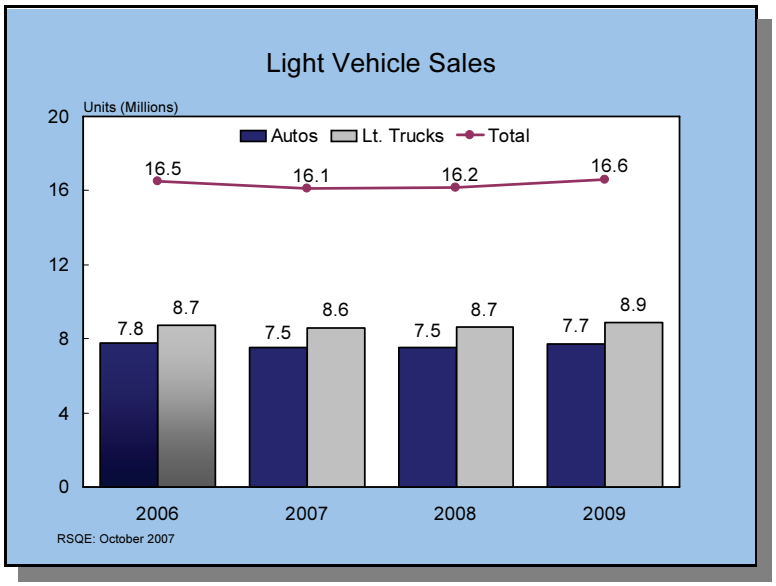

- ❏ Housing starts total 1.39 million units in 2007, down 33 percent from the 2.07 million houses started at the peak of the housing bubble in 2005.
- ❏ Although homebuilding turns around during 2008, the starts total is still down slightly for that year.
- ❏ Housing starts recover to 1.61 million units in 2009.
- ❏ Existing single-family home sales begin to edge up in the spring of '08, but the total for the year slips to 4.39 million units from this year's 5.01 million sales.
- ❏ With mortgage rates moving up, existing home sales recover to just 4.91 million units in 2009.

Despite the slower pace of job creation this year, real income growth has picked up a bit. Unusually large bonus payments earlier this year contributed to the growth in compensation, while growth in personal taxes slowed and inflation edged lower. Income growth backs off next year but picks up again when job growth accelerates in 2009. During the housing market boom, growth in consumer spending regularly outpaced income. As home values have slumped, however, consumers have become more cautious, holding spending increases somewhat below income gains.

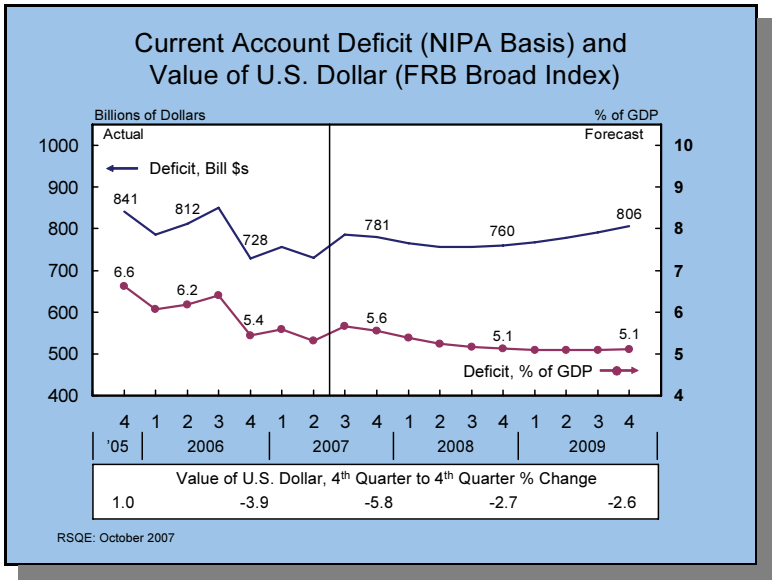

- ❏ During the housing boom years, 2003–05, consumption growth outpaced income growth by about ⅔ of a percentage point.
- ❏ Real disposable income rises by 3.5 percent this year followed by a 3.1 percent gain in 2008.
- ❏ Real consumer spending increases by 3 percent in both 2007 and 2008.
- ❏ In 2009, income growth accelerates to 3.5 percent, and consumer spending advances by 3.4 percent.

The pace of light vehicles sales has averaged just 16.1 million units during the first nine months of this year. That's well below the average annual sales of 16.8 million units over the 4 years 2002–2005. Higher fuel costs have taken a bite out of household purchasing power and diminished the appeal of popular but less fuel-efficient trucks and SUVs. Automakers have curbed the attractive financing and rebate incentives that stimulated stronger sales in recent years, and the housing slump has cut into the ability of households to extract equity from housing wealth.

- Light vehicle sales total just 16.1 million units this year, down from 16.5 million units in 2006.
- Sales of cars and light trucks edge up to 16.2 million units in 2008.
- Even with interest rates rising, light vehicle sales improve to 16.6 million units in 2009 as job growth strengthens and the recovery in the housing sector proceeds.
- Light trucks, including the less fuel-hungry crossover utility vehicles, capture about 53½ percent of the market in 2008 and 2009, down from a 55½ percent share in 2004.

With a substantial run-up in oil prices this year, the bill for imported oil is contributing to a deterioration in the current account deficit. The deterioration has been mitigated, however, by slow growth in nonoil imports. With oil prices stabilizing during 2008 and exports strengthening, the current account deficit improves next year. As demand for nonoil imports picks up during 2009, the current account deficit drifts up in dollar terms but holds steady relative to GDP. With this current account path, the value of the dollar continues to decline in an orderly fashion during the next two years.

- The current account deficit worsens to $781 billion, or 5.6 percent of GDP, at the end of this year as higher oil prices push up the oil import bill.
- By late 2008, the current account deficit improves to $760 billion, or 5.1 percent of GDP.
- While the current account deficit worsens in dollar terms during 2009, it remains stable relative to GDP at 5.1 percent.
- Measured against a broad index of other currencies, the value of the dollar declines by 5.8 percent this year and by about 2⅔ percent during each of the next two years.
